PUR spiral tubing - the right solution for every application

Spiral tubing can be manufactured from all available PUR materials. The following standard spiral grades are available:

Product Line 1

Our Product Line 1 comprises spiral tubing with calibrated outside diameters for use with quick connects. It is ideally suited for supplying compressed air to assembly line tools, and offers the following benefits:

- **high resilience**
- **superior abrasion resistance**
- **saves space due to small core diameter**
- **high elasticity**
- **ultimate tensile strength**

Product Line 2

Our Product Line 2 comprises special spiral tubing to supply air to equipment in industrial process automation, or with low resilience for pneumatic tools in manual operation. Spiral tubing of this grade has the same product properties as our Product Line 1 tubing. The thicker wall gives you even better properties in permanent service.

flamex® spiral tubing

This is ideally suited for all manual workplaces in welding applications. This tough version with high resilience guarantees long service life.

A:S:S® spiral tubing

Spiral tubing is also available made from our antistatic PUR tubing **A:S:S®**, and is used wherever electrostatic charging must be prevented, e.g. when manufacturing electronic components.

Most standard grades of our spiral tubing shown in the price list are available from stock without delay.

Spiral tubing in other sizes, colours, core diameters, block or working lengths is specially manufactured, usually at short notice. Multiple spiral tubing is also available.

On request, we also supply spiral tubing with or without screw unions. Please see our price list for the available types of screw union.

We will be pleased to answer any inquiries you may have.

Production Line A

size OD x ID mm	WL in mtr.	thread	core in mm	endings	
				A1 mm axial	A2 mm axial
single tubing spirals					
4 x 2,5	3	M5 / 1/8"s	20	100	500
